

CLINICAL OVERVIEW

WHY USE FOUR POINTS TECHNOLOGY?

Four Points Technology is a SBA-certified Service Disabled Veteran Owned Small Business (SDVOSB) Value Added Reseller delivering technology solutions to our Government customers around the world. We partner with top manufacturers - from interactive patient care solutions to anti-microbial medical grade computers and carts - to provide a complete set of clinically focused technology products.

Four Points Technology has worked exclusively with the Federal Government since 2002 and understands its procurement and fulfillment processes. Our dedicated clinical solution architects will evaluate your needs and systems to create a customized solution leveraging our manufacturer partnerships. We walk you through every step of how to integrate clinical products with IT, as well as procurement and finance options that make sense for you.

We work with Government healthcare agencies, facilities, and pharmacies to create new possibilities, make an impact on patient care, and increase employee loyalty. We help the Department of Veterans Affairs (VA) improve quality of care for our nation's veterans by easing staff administrative burden and enabling more face-to-face time with patients.

Whether you're interested in increasing technological capacity, optimizing budget, or increasing proficiencies for patient care initiatives, Four Points Technology is available to Federal agencies via existing contract vehicles, such as SEWP V and GSA Schedule 70, and ready to help fulfill the solutions you need.
